

## SC-3601C/SC-3601D Full Digital Wireless Audio Conference Chairman Unit/Delegate Unit

### Functional features

Wireless units are wireless conferencing systems that process audio signals and control signals in digital wireless.

1. With anti-mobile phone interference function, multiple speech modes, simple operation, complete functions and high confidentiality
2. The two-way transmission and control of multi-channel voice signals and data can be realized by preventing eavesdropping.
3. LCD screen, can display the battery level, microphone ID number, system control information and other working status; continue to speak time
4. The chairman unit has the priority function, which is not restricted by the restriction function and can cut off the representative's speech;
5. Gooseneck microphone pole design, microphone head with red light ring to indicate the boot status;
6. 41 CM long tube design, strong pickup distance, high-fidelity single directional capacitor core, sound reproduction, high clarity, low noise;
7. 575 audio processing, frequency width 30KHZ-15 KHZ, rich sound quality, outstanding voice.
8. The external transmitting antenna enables the signal to be transmitted in all directions without losing control within the effective range.

### Technical parameters

Model	SC-3601C/SC-3601D
Power supply	Chairman DC: 3.7V 3000mAh
	DC: 3.7V 2100mAh
Transmitting power	10mW
Pickup microphone	Capacitive, single directional
Microphone sensitivity	-43±3dB@1KHz
Frequency response	20-18KHz
Duration of continuous use	Chairman 20 hours
	Represents 15 hours
