

## SD-10A 10-channel power sequencer

### Product description

1. The first choice of power management equipment for professional sound reinforcement system, with capacitive filtering function.
2. 8-channel power sequencing on/off.
3. Remote control (power-up + 24 Vdc signal) 8-channel power sequencing on/off — active when the power switch lock is in the off position.
4. When the remote control is valid, the ALARM port of the rear panel is controlled to be connected at the same time, which plays a cascade control ALARM function.
5. 8-channel channel switch status can be displayed on the panel; Real-time display of front panel voltage
6. Front 2 groups of power output interface function, front panel USB power port, USB led light can be connected.
7. The channel can be closed and started in time sequence through the one-button switch on the panel to realize the time sequence function;
8. With 232 interface, it can be controlled by central control equipment, support online control, and support 9 devices to be used online at the same time;

### Technical parameters

Model	SD-10A
Number of channels	8+2
Total Output Power	7kW
Time per step	1 SEC
Cable definition	Live line(red), zero line(black), ground line(white)
Size	480×293×44 mm
Gross weight	4.7Kg
